A young person's perspective of administrative data research

Rianna Romeo¹ and Shayda Kashef¹

¹ADR UK, London, United Kingdom

Recent public attitudinal studies have shown that the public want to know of the benefits of administrative data research. However, a common challenge is translating this information in an engaging and meaningful way. To bridge this gap, ADR UK hosted a summer intern to translate some research for the public.

Drawing from her own perspectives and skill, the intern will create a bespoke translation of administrative data research and accompanying communications campaign over the course of 12 weeks. The intern will work closely with relevant ADR UK researchers and gain feedback from a public panel to ensure the translation is both accurate and engaging.

The publication will be available in early September 2025. It will not only add to a suite of publicly-accessible outputs demonstrating the value of administrative data research, but the internship will demonstrate an example of how to meaningfully include young people in administrative data research.

The publication and accompanying communications campaign will launch later this year.

Temporary page!

$\LaTeX$ was unable to guess the total number of pages correctly. As there was some unprocessed data that should have been added to the final page this extra page has been added to receive it.

If you rerun the document (without altering it) this surplus page will go away, because $\LaTeX$ now knows how many pages to expect for this document.
